(54) Title: A LOAD CARRYING VEHICLE

(57) Abstract: The invention relates to a load carrying vehicle of the type that has a body forming a load carrying compartment (16) above a load deck (17), and where the load carrying compartment (16) is of the side loading type. The vehicle has a load carrying structure located in its load carrying compartment, the load carrying structure including a platform support structure that is located along the length of the load carrying compartment (16) along the centre line of the load deck (17). The platform support structure includes support formations that provide for the support of load platforms (42) of the load carrying structure, on which loads can be supported, at different levels above the two side halves of the load deck. The mode of support permits easy manual adjustment of the level of individual load platforms above the load deck.
